About The Able Trust Annual Data Report

The Able Trust is also known as the Florida Endowment Foundation for Vocational Rehabilitation. The Able Trust is a public-private partnership foundation established by the Florida Legislature in 1990 to be the direct support organization (DSO) for the state's vocational rehabilitation program. The Able Trust supports the Florida Department of Education, Division of Vocational Rehabilitation (FDOE/VR) in their efforts with Florida employers, community organizations, and career development partners to help Floridians with disabilities of all ages enter the workforce. Through a unique combination of research, outreach, and capacity building, The Able Trust works to strengthen our current system to ensure more Floridians with disabilities have opportunities to enter the job market.

The Able Trust provides annual data to FDOE/VR employers, partners, the non-profit community, and others who are engaged in helping Floridians with a disability find meaningful employment. The Able Trust updates the data report annually.

This report uses U.S. Census Bureau's American Community Survey (ACS) data. The questions asked by the Census Bureau to determine this data are available in Appendix 1. Respondents are not required to disclose if they have a disability – all responses are voluntary.

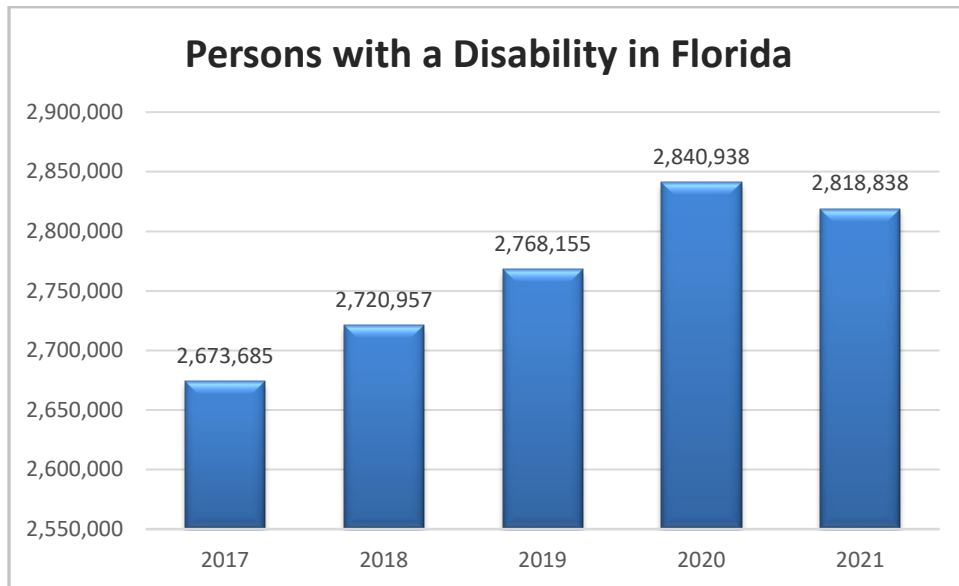

The data reported here are the 5-year averages, with 2021 being the most recent available. That data is compared to the previous 5-year averages in the report. Due to issues collecting data during the COVID pandemic, the Census Bureau has issued statements about the reliability of the 2020 1-year data. That data was released later than usual as an experimental data set because of those data collection issues.

Note that all the following data should be considered estimates, as they are estimated from a sample of U.S. households. Therefore, they all have margins of error (MOE). For example, the 2021 estimate of 2,818,838 Floridians who have a disability has a margin of error of plus or minus 16,223. The margin of error is 0.575 percent of the estimate. It is typical that the ACS 5-year estimates for 2020 and later have slightly larger margins of error than the previous reports. That is because of difficulties in surveying people during the COVID pandemic. Previous ACS estimates use smaller margins of error. For example, the 2019 estimate of 2,768,155 has a margin of error of plus or minus 11,867. That represents a 0.428 percent margin of error. Each year's estimates have differing margins of error, as can be seen when looking at the ACS data from the U.S. Census Bureau.

The ACS uses a 90 percent confidence interval for their estimates. This means that there is a 90 percent probability that the actual number of Floridians with a disability in the 2021 5-year average is between 2,802,615 and 2,835,061. It is important to note that estimates of Floridians with disabilities are much greater when using the Center for Disease Control (CDC) definition (1 in 4 Americans) and the National Institute for Health (NIH) estimate of Americans with a diagnosable mental health disorder (also 1 in 4 Americans).

Floridians with a Disability

According to the latest data available, there are an estimated 2,818,838 Floridians who indicate they have a disability. That is 13.4 percent of Florida’s population, which compares to 12.6 percent of the U.S. population who have a disability. In the population who are 18 to 64 years of age, the most likely group to be in the workforce, there are 1,252,996 Floridians who have a disability. Note that there are people who have a disability that do not disclose their disability.

We know from the data that the number of Floridians is increasing, yet the number of Floridians with a disability slightly decreased. You can see that since 2017, the percent of Floridians with a disability went from 13.4 percent to 13.6 percent in the 2020 data and has fallen back to 13.4 percent with the 2021 data.

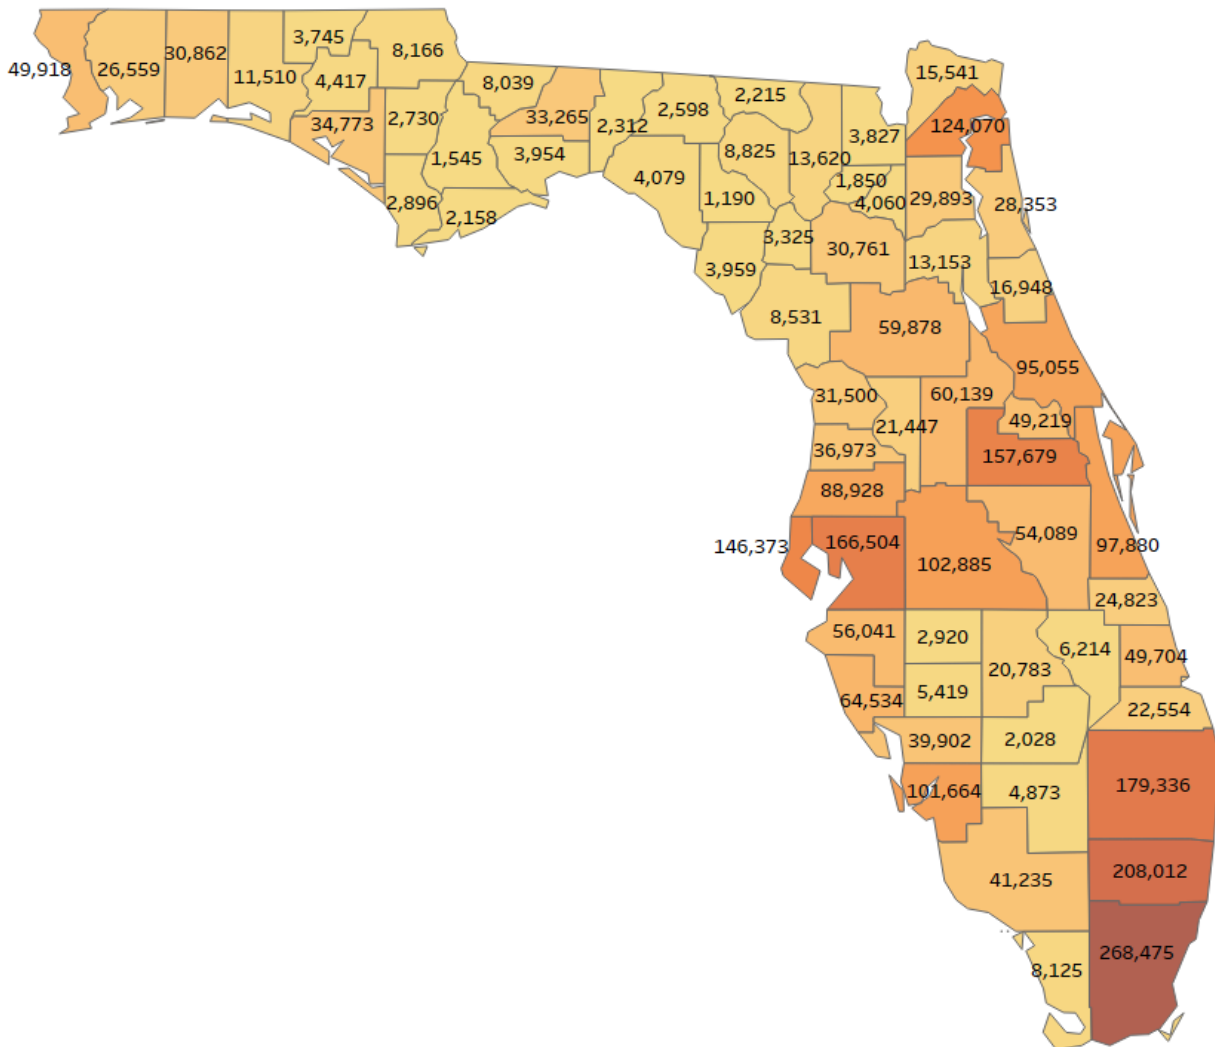

The chart below indicates the numbers of people who have differing types of disabilities. It is clear that many Floridians have more than one type of disability.

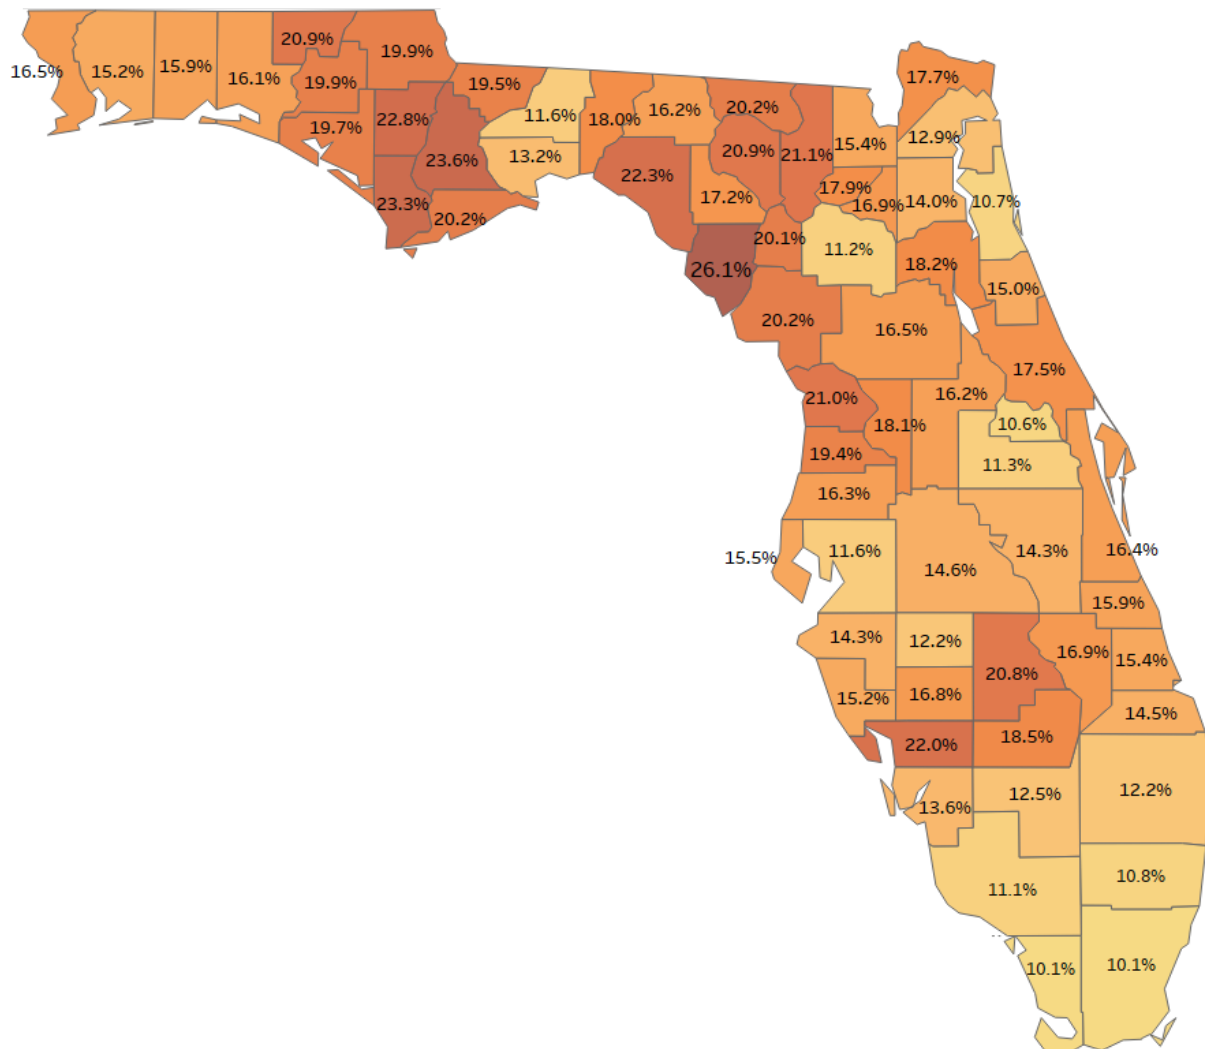

Where Floridians with a Disability Live

The map below shows each of Florida's 67 counties and the number of persons with a disability that live in each one. It is a heat map with the counties who have larger numbers of Floridians with a disability indicated in the darker color.

Number of People in Florida with a Disability, by County

To see a table of the data on number of people who indicate they have a disability for all Florida counties for the years 2017 through 2021, see Appendix 2.

Floridians with a Disability Age 18 to 64

The typical age group considered normal working age is 18 to 64 years old. Although some people have retired before age 64, there are also persons still working into their 70s and 80s. The chart below shows the number of Floridians with a disability who are age 18 to 64. It is clear that those numbers have been increasing, yet there was only a slight increase between the 2020 and 2021 five-year average data.

Employment of Floridians with a Disability

The good news is that the number of Floridians with a disability who are employed continues to increase each year. In 2017 there were 381,326 Floridians with a disability working, and the 2021 data indicates an increase to 543,775 – a 42.6 percent increase over that four-year period.

This substantial increase of more than 100,000 persons with a disability working could be due to the tightness in the labor market with job openings exceeding those looking for work.

To see the number of Floridians with a disability who are employed for each county from 2017-2021, See Appendix 3.

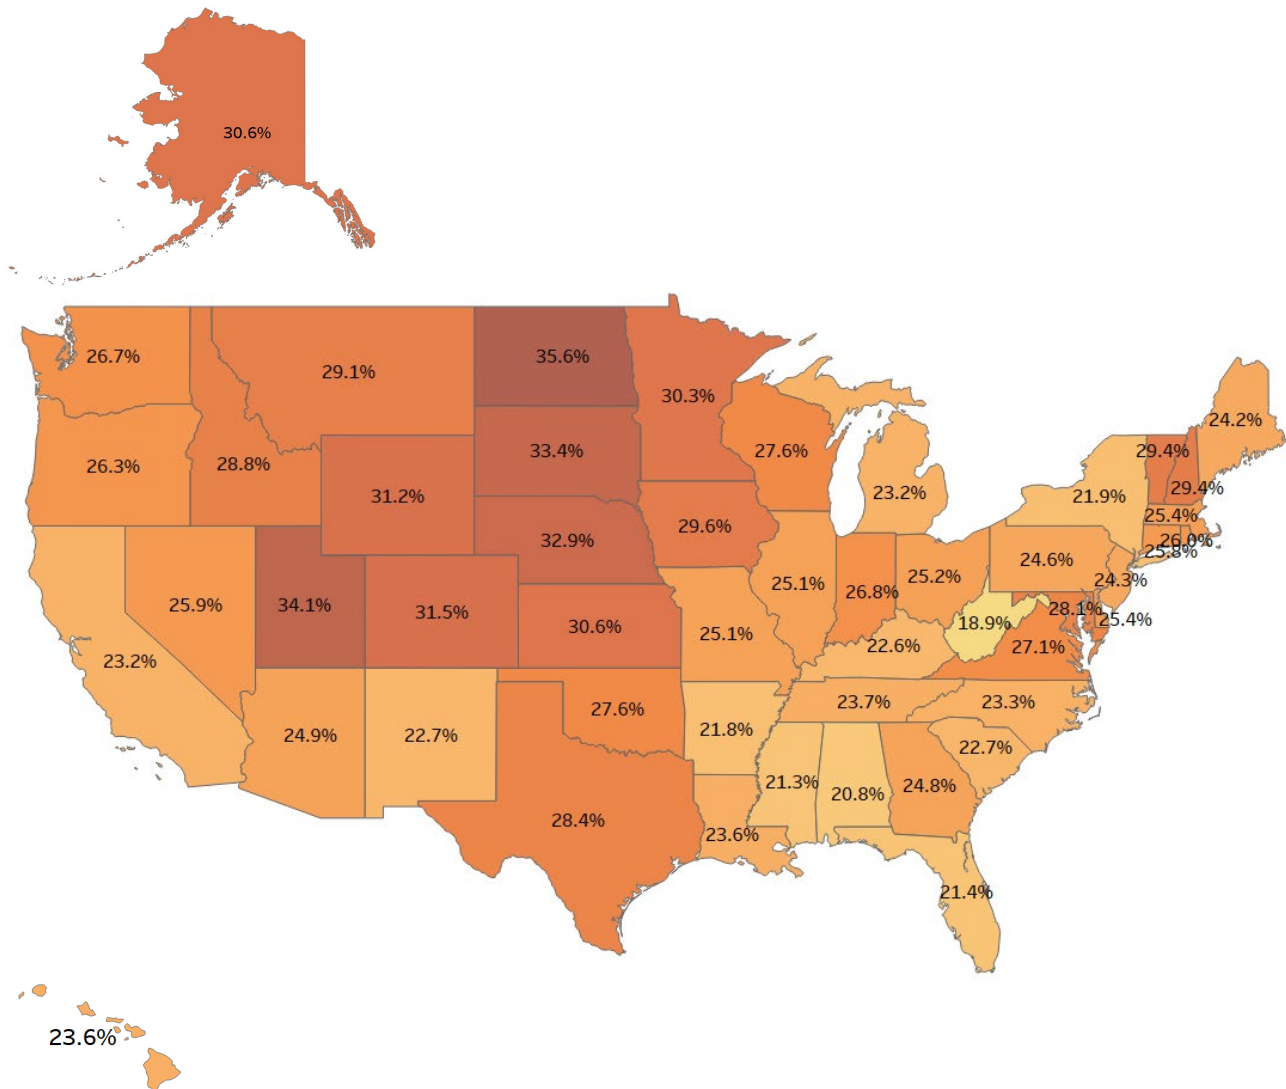

Differences in Rates of Employment

An important difference between the population with a disability and the overall population is the percentage of people who are working. The most recent data shows that 63.3 percent of the population without a disability between the ages of 20 and 64 are employed, versus only 21.4 percent for those with a disability. The Able Trust has established a goal to close this gap by 10 percentage points over the next 10 years by continuing to assist those persons with a disability obtain meaningful employment.

Florida's percentage of persons with a disability who are working is 21.4 percent, which is lower than the U.S. rate of 25.0 percent. Florida's rate is not substantially different from most of the states in the Southeastern U.S.

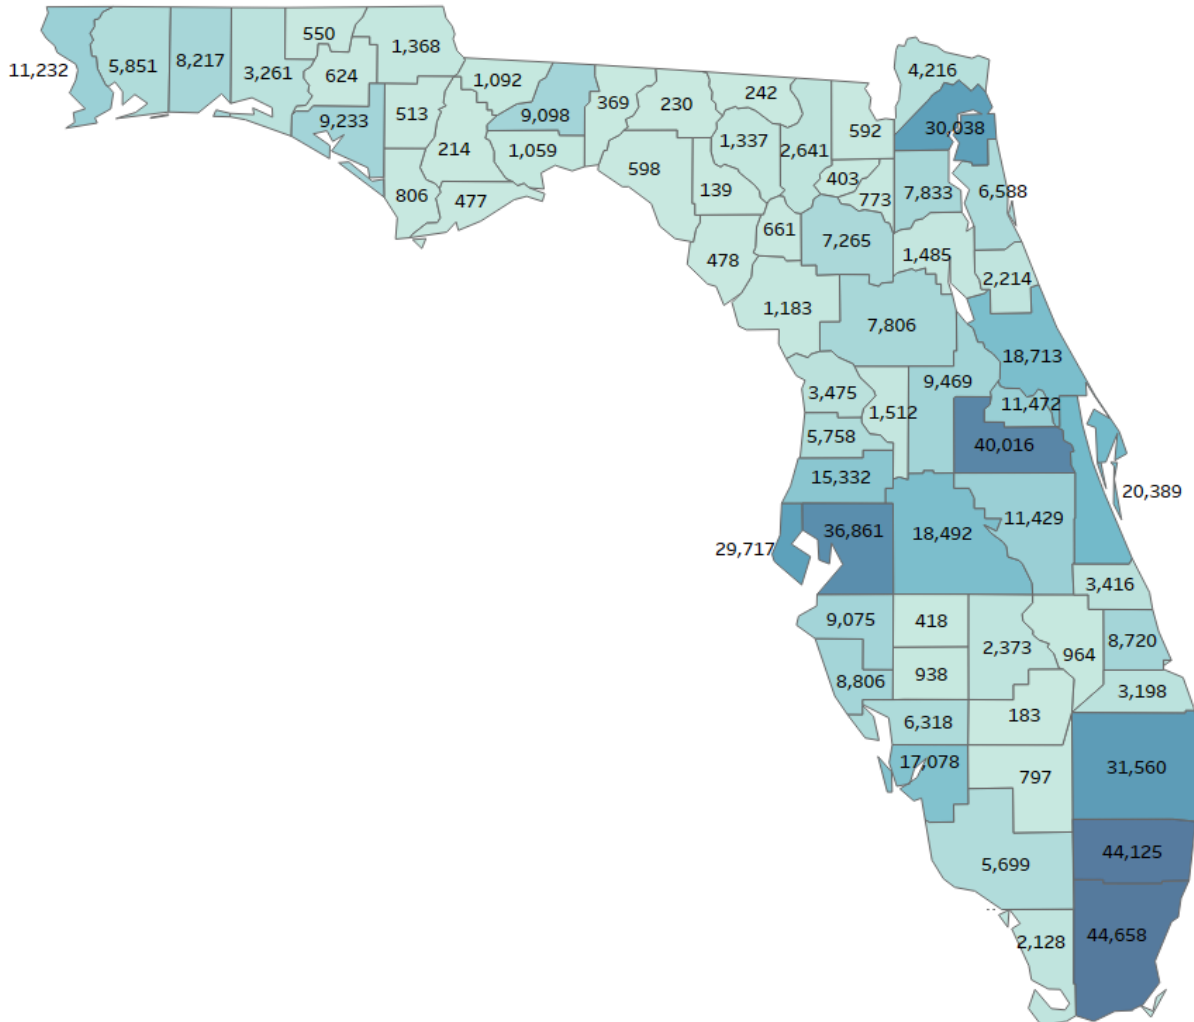

You can see each state's most recent percentage of persons with a disability who are working in the map below:

Employment of Floridians with a Disability by County

The map below shows the number of Floridians with a disability who are working, by county. There are currently 543,775 Floridians with a disability who are working, according to the latest data available.

Number of Floridians with a disability who are working, by county (ages 18 to 64):

Definition of Not in the Workforce versus Unemployed

The workforce includes those who are currently working and those who are looking for work. If someone is not in the workforce, it means that they are not working and not looking for work. If they are unemployed, it means that they are currently not working, but they are looking for work.

Full-time and Part-time

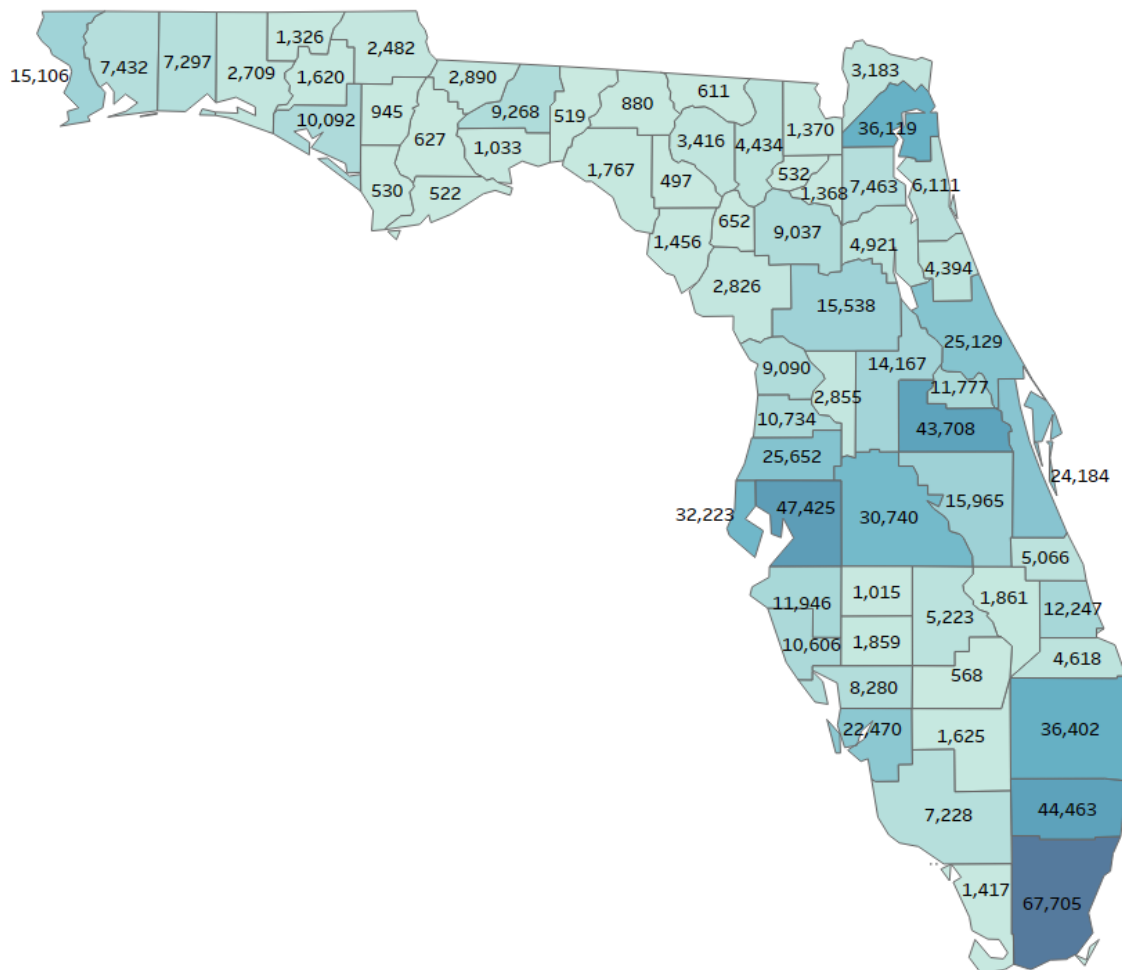

One of the major differences between the workforce with a disability and those without a disability is the percentages of those groups that either do not work, work part-time, or work full-time. A high percentage of persons with a disability do not work – 56.6 percent, compared to 18.1 percent for those who have no disability.

There are also large differences between the two groups in terms of full-time work. For the persons with a disability, 24.0 percent work full-time and for those without a disability the percentage is 57.3 percent. The difference between these two groups that work part-time is smaller – 19.4 percent of those with a disability are working part-time, compared to 24.5 percent of those with no disability.

	With a Disability	No Disability
Full-time	24.0%	57.3%
Worked Part-time	19.4%	24.5%
Did Not Work	56.6%	18.1%

Floridians with a Disability Not in the Workforce

The map below indicates the number of persons with a disability, age 18-64, who are not in the workforce. Not in the workforce means that they are not working and not looking for work. The map is a heat map where the counties with more persons with a disability who are not in the workforce are indicated by the darker color. There was an average of 709,221 Floridians with a disability who did not work during this time period.

To see the data for the number of Floridians with a disability who were not in the labor force by county for the past five years, see Appendix 4.

Floridians with a Disability Who are Unemployed

For a map the most recent data on the number of Floridians who are not working but who are looking for work, see Appendix 5. For the county data for the past five years on the number of persons with a disability who are unemployed, see Appendix 6.

Different Types of Organizations Where People Work

When we look at the difference in the types of organizations at which Floridians with a disability work compared to individuals with no disability, the data shows that persons with a disability are more likely to work for a non-profit, a government agency, or be self-employed in a non-incorporated business.

Differences in Occupations

When we look at the occupations of persons with a disability in Florida, they are less likely to be in the Business, Science, and Arts category than those with no disability, but as likely or more likely to be in all the other occupation categories.

Differences by Industry

When broken down by industry, persons with a disability are slightly more likely to be in services and retail trade than those indicating no disability. For most of the categories, there is only a small percentage difference between the two groups. Persons with a disability are more likely to work in retail trade, public administration, and “other services”. Persons with a disability are less likely to work in the Financial Activities and the Education & Health Services industries.

Differences in Educational Attainment

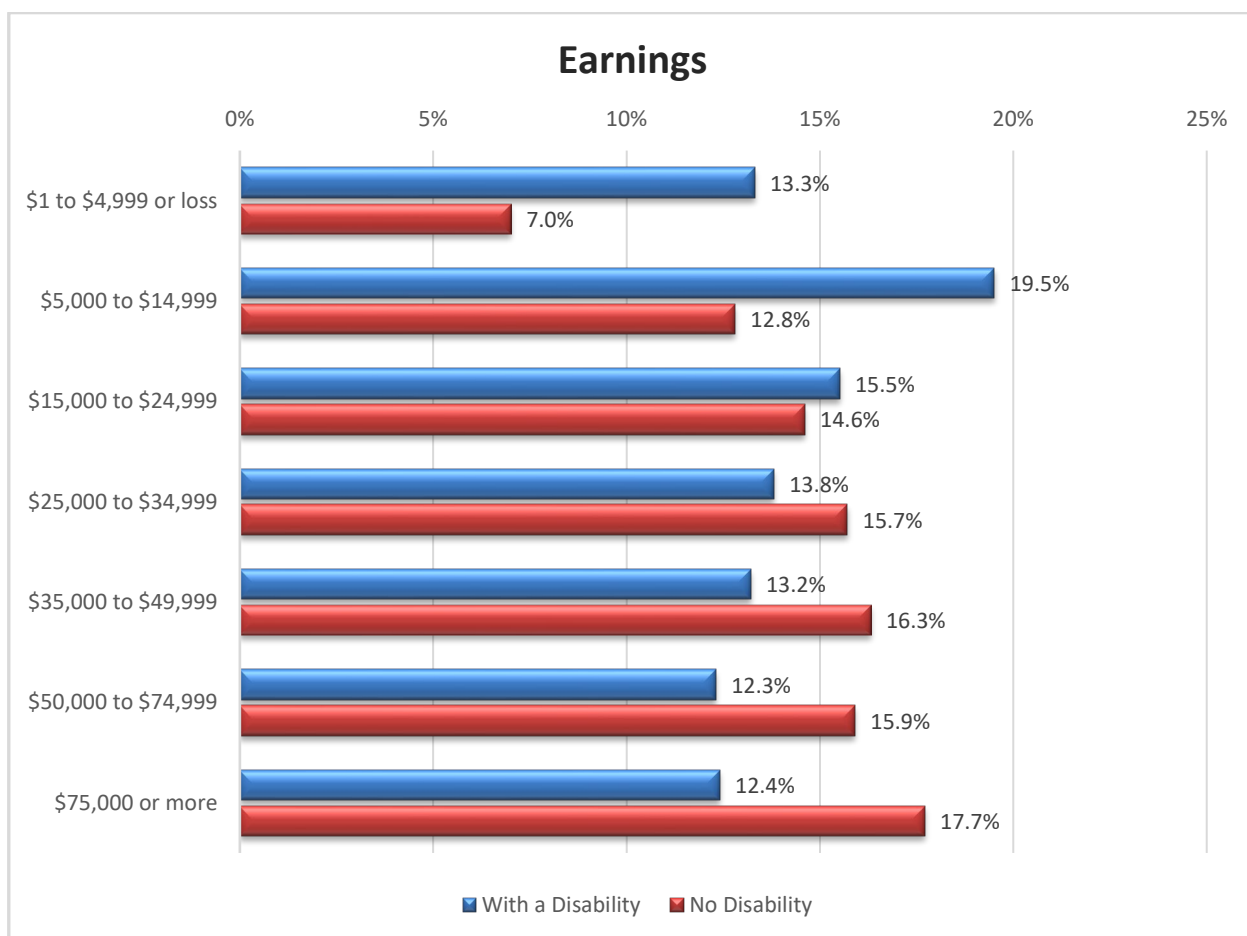

There are larger differences between the two groups when we look at educational attainment and earnings. It is clear that the group with a disability has a lower educational attainment level than the group with no disability. For the group with a disability, fully 50.9 percent have a high school degree or less, with only 20.4 percent attaining a bachelor's degree or higher.

Additionally, 64.0 percent of the group with no disability has at least some college and 34.1 percent have a bachelor's degree or higher.

Differences in Earnings

It is typical that the more highly educated groups earn more. The chart below shows the distribution of earnings for both groups. It is clear that the higher earning group is the group with no disability. The median income for the group with a disability is \$25,977 versus the group with no disability at \$34,910. This can be due to higher education levels, but it could also be attributed to benefit cliffs that persons with disabilities can face if they are receiving payments from the Social Security Disability program. Earnings often must be kept below certain thresholds to continue to receive monies from many disability programs. The limitation on earnings can be a reason that many persons with a disability are not working or only working part-time.

See Appendix 7 for median income by county for Floridians with a disability. Note that this information is not available in this format for all Florida counties.

Contact The Able Trust

This report shows where Floridians with a disability live and work, as well as some of the details about employment and income. What is clear is that there is a large difference between persons with a disability and those who do not have a disability. The data also shows the large differences for persons with a disability between Florida's rural and urban counties.

To get involved in helping Floridians with a disability become employed, please contact The Able Trust at info@AbleTrust.org

Appendix 1. Questions Used in the Survey to Estimate the Number of Persons with a Disability on Current Population Survey (CPS) by U.S. Census Bureau

The CPS uses a set of six questions to identify persons with disabilities. A response of “yes” to any one of the questions indicates that the person in question has a disability. The disability questions appear in the CPS in the following format:

This month we want to learn about people who have physical, mental, or emotional conditions that cause serious difficulty with their daily activities. Please answer for household members who are 15 years old or over.

1. Is anyone deaf or does anyone have serious difficulty hearing?
2. Is anyone blind or does anyone have serious difficulty seeing even when wearing glasses?
3. Because of a physical, mental, or emotional condition, does anyone have serious difficulty concentrating, remembering, or making decisions?
4. Does anyone have serious difficulty walking or climbing stairs?
5. Does anyone have difficulty dressing or bathing?
6. Because of a physical, mental, or emotional condition, does anyone have difficulty doing errands alone such as visiting a doctor’s office or shopping?

Labor force measures from the CPS are tabulated for persons aged 16 and older.
